SUMMARY

Computer Engineering student with hands-on experience extracting, processing and modeling data from multiple sources, building data collection and cleaning pipelines, and creating dashboards and metrics to support decision-making. Proficient in Python (pandas, scikit-learn), SQL (PostgreSQL) and R for statistical modeling and data analysis. Experienced across the full data project lifecycle: collection, handling of data quality issues and inconsistencies, modeling, validation and communication of results.

TECHNICAL SKILLS

- **Data & Analytics:** SQL (PostgreSQL), Python (pandas, scikit-learn, matplotlib), R, data cleaning and quality, multi-source data integration, descriptive statistics, supervised and unsupervised learning
- **Development:** Django REST Framework, REST APIs, Git, pytest, relational databases
- **Management & Processes:** Agile methodologies (Scrum/Kanban), process mapping, technical documentation, Miro, Trello, Jira
- **Languages:** Portuguese (native), English B2 (BRASAS English Course, Dec 2018)

PROJECTS

Predictive Cloud Resource Allocation with Neural Networks - In progress

- Developing a short-term workload forecasting model (LSTM/GRU recurrent neural networks) trained on real production data center traces (Google Cluster Trace, Alibaba Cluster Trace).
- Designing a simulation that turns forecasts into compute resource allocation decisions, evaluating operational cost and SLA violations against traditional methods.

EDUCATION

Pontifical Catholic University of Rio de Janeiro (PUC-Rio) *Mar 2022 – Present*
B.S. in Computer Engineering - Expected graduation: December 2027

EXPERIENCE

Innovation Intern - MJV Technology & Innovation *Jan 2026 – Present*

- Consult on structuring innovation business process models: mapping workflows and collecting and analyzing operational data to identify bottlenecks and define efficiency metrics.
- Produce process documentation, quantitative analyses and supporting materials to inform decisions and align teams and stakeholders.

Undergraduate Researcher - FROG PUC-Rio *Mar 2025 – Mar 2026*

- Developed WindAnalyzer, a decision-support tool for non-parametric modeling of wind data: end-to-end pipeline for collecting, cleaning and validating time series (integrating MERRA-2 reanalysis data with INMET weather stations, filtering inconsistent readings and correcting statistical bias).
- Implemented a non-parametric modeling pipeline (K-means clustering, kernel density estimation and Monte Carlo simulation) for probabilistic wind power projection, replacing deterministic manufacturer curves with a data-driven approach with 90% confidence bands.
- Software registered with INPI, the Brazilian National Institute of Industrial Property - BR512026006513-5

Systems Analyst - Instrumento.io (Startup) *Oct 2024 – Sep 2025*

- Maintained and evolved the startup's platform across the entire development cycle: feature implementation, bug fixes, testing, user acceptance and integration with external services and databases.

Teaching Assistant - Introduction to Data Science - PUC-Rio *Aug 2024 – Dec 2024*

- Supported students in data collection, cleaning and preprocessing, implementation of supervised and unsupervised learning models, and model evaluation with Python (pandas, scikit-learn).

Teaching Assistant - Integrated Project - PUC-Rio *Mar 2023 – Aug 2024*

- Hands-on course on methods and tools for running engineering projects with agile practices, focused on Scrum.
